

SDM230-Modbus

Single-phase Meter User Manual

Step1 Overview

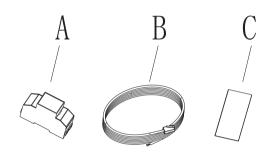

The energy-meters "with a blue back-lighted LCD screen for prefect reading" are used to measure single-phase like residential, Utility and Industrial application. The unit measures and displays various important electrical parameters, and provide a communication port for remote reading and monitoring. Bi-directional energy measurement makes the unit a good choice for solar PV energy metering.

Step2 Technical Parameters

General Specifications	
Voltage	230Vac
Voltage range	176~276Vac
Base current(Ib)	10A
Current range	0.5~100A
Power consumption	<2W/10VA
Frequency	50/60Hz(±10%)
AC voltage withstand	4KV for 1 minute
Impulse voltage withstand	6KV-1.2uS wavform
Max. Reading	999999.9kWh
Accuracy	
Voltage	0.5% of range maximum
Current	0.5% of nominal

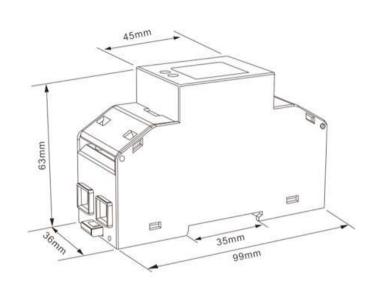

Frequency	0.2% of mid-frequency	
Power factor	1% of Unity	
Active power	1% of rangemaximum	
Reactive power	2% of range maximum	
Astinoppor	Class 1 IEC62053 - 21	
Active energy	Class B EN50470 -3	
Reactive energy	1% of range maximum	
Enviroment		
Operating temperature	-25℃ to +55℃	
Storage and transportation temperature	-40°C to +70°C	
Referencetemperature	23°C±2°C	
Relative humidity	0 to 95%, non-condensing	
Altitude	up to 2500m	
Installation category	CAT III	
Degree of pollution	2	
Communication		
Communication	RS485 output for Modbus RTU	
Baud rate	9600	
Mechanics		
Din rail dimensions	36x99x63 (WxHxD) DIN 43880	
Mounting	DIN rail 35mm	
Sealing	IP51 (indoor)	
Material	self-extinguishing UL94V-0	

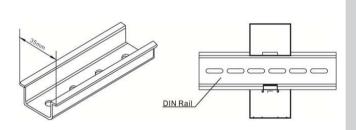

Step3 Unpacking

Item	Number	Description
А	1	Single phase meter
В	1	RS485 cable (standard length 5 m)
С	1	User Manual

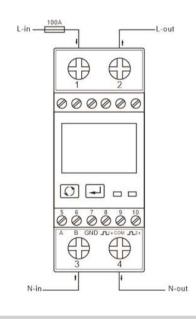

Step4 Dimension (Unit: mm)

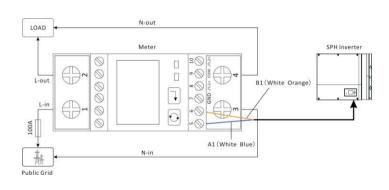

Step5 Installation

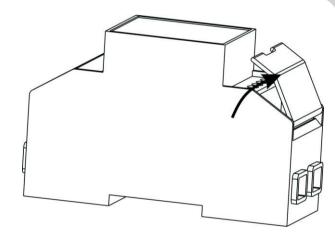

Wire diagram:

The Ingress Protection rate is IP51 and the pollution degree is PD2, So meter must be install in door. The whole installation chart shows as below:

before screw the cable. Please open the cover of meter:

The standard communication cable between meter and inverter is 5m, if it is not enough, Customers can be extended through the network cable.

Note: be careful the wire of input and output of L/N, if lines are wrong, it may destroy the meter.

Step6 LCD display

Item	Descriptions	
1	7 digits used to display measured values or RTC	
2	Total value	
4	Import information, Export information	
5	Max. Demand for Power or Current	
6	Pulse output 1 and Pulse output 2	
7	Measurement units PF = power factor Hz = frequency Bar display of Power Communication indicator Time information	
8		
9		
10		
11		
12	Low battery warning	
13	Lock symbol	

When it is powered on, the meter will initialize and do self-checking.

Full screen→ software version→ Modbus ID→ Baud rate→ total kWh

Scroll display by Button

After initialization and self-checking program, the meter display the measured values. The default page is total kWh. If the user wants to check other information, he needs to press the scroll button on the front panel.

The display order by scroll button

Total kwh → import kwh → export kwh → resettable kwh → total kVarh → import kVarh → export kVarh → resettable kVarh → Max. power demand → voltage → current → W → Var → VA → power factor → frequency → pulse constant → Modbus ID → baud Fate → continuous running time.
